Hydraulic adjustable track

An optional hydraulically adjustable axle providing a true 2000 to 3000mm wheel track.

Hydraulic track adjustment can be done on the move with a push of a button. Cylinders located inside the front and rear axles control the track width.

Power is transferred to the rear wheels via multistage extendable drive shafts coupled to the droplegs to get the power to the ground.

Tight headlands, no worries

Designed to turn in very small headlands with the simplicity of a two wheel steer configuration.

The key in achieving this is the layout of the suspension system and open chassis design.
