General Information and Specs

General

The SuperFlow Mobile Hopper is an alternative method of transferring chemical into the main spray tank. The chemical can either be in liquid form or granular form and once in the hopper the chemical can then be easily transferred into the main spray tank. The hopper facilitates drum rinsing with fresh water and the hopper itself can be rinsed and all rinsate then transferred into the tank.

The hopper transfers the chemical via venturi effect. Water from an external supply is

pumped under the bottom of the hopper where it passes through a venturi fitting under the hopper. This causes a suction effect and when the bottom of the hopper is open (via the hopper tank ball valve) the tank contents are drawn into the flow from the pump passing under the hopper and then transferred into the main spray tank. This eliminates chemical attack resulting from high concentrations of chemical coming into contact with spray components.

NOTE: The level indicator should be used as a guide only.

NOTE: Never let the hopper run empty or suck air, this may cause foaming in the main tank.

Operation

1. Fit hose Item 10 or 11 from a pumped external water source to the 1½" output camlock located on the right hand side of the hopper. (Check that the delivery hose to the hopper is not restricted or kinked).
2. Connect the other hose to the 1½" camlock fitting that is on the back of the hopper and feed to the main spray tank of the machine.
3. Ensure the taps to the tank rinse and the drain are closed.
4. Turn on the external water source to start getting pressure in the lines. and push water through the venturi
5. Operate the pump at the speed necessary to generate at least 45 psi delivery pressure.

NOTE: The higher the pump delivery pressure, the greater the venturi suction and the quicker the hopper will transfer the chemical. The delivery pressure should not exceed 52 psi.

6. Put the required amount of chemical into the hopper (liquid or granular). Wear the necessary protective clothing and use the required safety equipment to avoid exposure to chemicals.
7. Open the hopper tank ball valve at the bottom of the hopper by turning the yellow handle down. The chemical should be now transferring to the main spray tank.
10. Rinse all chemical drums and the hopper as per the rinsing instructions.

When finished using the hopper:

- Close the hopper tank ball valve at the bottom of the hopper by turning the yellow handle so that it is horizontal.

Rinsing

To rinse the Induction Hopper and chemical drums with fresh water from the external water delivery.

NOTE: Check that the delivery hose to the hopper is not restricted or kinked.

1. Make sure that the Hopper Rinse valve on the top of the hopper is 'OFF'.

2. Fit a hose from a pumped external water source to the 1½" camlock fitting that is on the rear of the hopper.
3. Connect another hose to the output camlock located on the right hand side of the hopper and feed to the main spray tank of the machine.
4. Operate the external fresh water pumping system at the speed necessary to generate at least 45 psi delivery pressure.
5. Open the hopper tank valve at the bottom of the hopper by turning the yellow handle down.
6. Ensure that the hopper drain tap, also located at the bottom of the hopper, remains 'CLOSED'.
7. To rinse a drum, open the lid and push the drum over the rinsing nozzle located in the top of the hopper.
8. To rinse the hopper, ensure the lid is closed and turn the Hopper Rinse valve on the top of the hopper 'ON'. Close this valve when the hopper has been rinsed.

When the hopper is empty:

- Remove any chemical drums that have been rinsed from the hopper.
- Turn the hopper tank valve at the bottom of the hopper 'OFF' by turning the yellow handle so that it is horizontal.

Drain the hopper of any remaining liquid using the hopper drain tap at the bottom of the hopper.

The hopper can be rinsed and the rinsate emptied through the hopper drain ball valve rather than transferred into the main spray tank.

To do this:

1. The hose from the right of the hopper needs to be directed to a safe location as it may contain rinsate.
2. Ensure the pumped external fresh water supply system is operating.
3. Open the hopper rinse valve on the top of the hopper.
4. 'OPEN' the hopper tank ball valve at the bottom of the hopper by turning the yellow handle down so that it is vertical, removing the rinsate from the hopper.
5. Open the hopper drain valve.
6. When finished, turn off the external water delivery and leave the taps open until all fluid has stopped draining.

NOTE:

- Take proper safety precautions to avoid any contact with rinsate when draining, as it may contain chemical residue.
- Be careful as to where the rinsate is being deposited as it may contain chemical residue.

Hopper Ball Valve is shown in the open position, Vertical.

Hopper Drain Tap

Storage

If the SuperFlow Mobile Hopper is to be stored for a long period of time without use, there are several tasks that need to be performed.

1. Clean the Hopper thoroughly as described under “flushing”.
2. Store the Hopper out of direct sunlight and where it will not be affected by frosts.
3. Protect hoses and frame.

Maintenance

To ensure that you get the most from your SuperFlow Mobile Hopper, it is important to regularly maintain and service.

Safety Decals

Understanding safety decals and their purpose assists in the safe operation of your sprayer. Safety decals are there for your protection and it is the responsibility of the owner operator to replace damaged and/or missing safety decals.

Regularly review safety decals with operators. It is very important to ensure that all new machine components and replacement parts include current hazard identification decals.

Replacement safety decals can be ordered from all Goldacres dealers.

Safety

General

The following pages outline important safety information. At Goldacres safety is a high priority. These safety and warning instructions **MUST** be followed to ensure the safe operation of your Goldacres equipment.

Explanation of key terms used in this operator's manual are:

DANGER - You will be killed or seriously hurt if you don't follow instructions

WARNING - You can be seriously hurt if you don't follow instructions

CAUTION - You can be hurt if you don't follow instructions

NOTE - Is used to notify people of installation, operation or maintenance information that is important but not hazard related.

The Operator

All operators of this equipment should be adequately trained in the safe operation of this equipment. It is important that all operator's have read and fully understand the operators manual prior to using this equipment.

All new operators should be trained in an area without bystanders or obstructions and become familiar with the sprayer prior to operation.

Safety Precautions

WARNINGS

- Any unauthorised modifications to this equipment may affect its function and create a serious safety risk.
- Never attempt to clean parts or nozzles, by blowing with mouth.
- Never attempt to siphon chemicals, or substances, by sucking.
- It is imperative that the vehicle manufacturer's specifications be checked and all instructions for use when transporting, or towing, be adhered to at all times.
- If trailer brakes (hydraulic or electric) have

been fitted to this equipment, ensure they are regularly checked and inspected for correct performance.

- Care should be taken when transferring liquid into the tank to ensure that the gross weight of the equipment does not exceed the safe working load for the operator.
- Water weighs 1kg per litre, however conversion factors must be used when spraying liquids that are heavier or lighter than water. Example: liquid urea has a density of 1.28 kg/L and will therefore be significantly heavier than water if the tank is filled completely.
- Regularly check the pump mounting bolts. (The pump will always vibrate to some degree when operating, and this may work the bolts loose.)
- Suitable care should be taken when driving with the equipment attached to the vehicle. Consideration should be given to both the carrying capacity of the vehicle and the gradient of the terrain when determining the speed at which the vehicle can be driven safely.
- Ensure that the maximum speed of the vehicle, when loaded, is within the vehicle manufacturers limitations.
- Ensure equipment is securely fastened, or attached, to the vehicle at all times.
- Keep clear of overhead obstructions - especially powerlines as contact can be fatal.
- Never work under a raised boom unless properly supported and secure.

CAUTIONS

- A supply of fresh water should be with the equipment at all times.
- Standard polyethylene tanks are not designed for use with diesel fuel or any flammable liquid.
- Do not use this machine in ambient temperatures exceeding 40 degrees Celsius.
- Do not use access steps or ladders on this equipment unless it is safely supported.

NOTES

- Always read and understand the

operator's manual prior to operation of this equipment.

- It is the responsibility of the operator to ensure that there are no decals missing from the equipment and that any damaged or missing decals are replaced prior to operation.
- Goldacres equipment ordered or operated, outside the guideline limitations may not be warranted by Goldacres for successful performance. Operators working outside these limitations do so at their own risk, unless specific advice has been sought from and provided by Goldacres in writing.
- Inspect the equipment thoroughly for damage and wear before operation.
- Do not operate the equipment while under the influence of any drugs, alcohol or if excessively tired.
- Make sure that the equipment complies with all relevant road regulations when transporting.
- Not all Goldacres fire fighting units/water carts are legal for road use. The Goldacres Road pack includes changes to the trailer specification for road use. The addition of lights to a trailer that has been built for off road use only may not be sufficient to satisfy requirements for road use.
- After reading the operator's manual if there is any thing that you do not understand please contact your Goldacres dealer or Goldacres.

Personal Protective Equipment (PPE)

Always wear close fitting clothing and safety equipment designed for the job.

Chemicals can be harmful to humans, appropriate PPE should be used when handling chemicals. Always refer to the chemical manufacturers label for guidelines on the appropriate PPE to use with the chemicals you are using.

Goldacres also suggest that you read and understand the following Australian standards:

- Australian Standard for Chemical

protective clothing AS3765

- Australian Standard for Respiratory protection devices AS1715

Fluids under pressure

Do not disconnect any hoses, nozzles or filters while equipment is operating. Disconnecting these components while under pressure may result in uncontrolled fluid discharge which may be hazardous.

When the repair is complete ensure that all fittings and lines are secured before re-applying pressure.
