# Safety

## General

The following pages outline important safety information. At Goldacres safety is a high priority. These safety and warning instructions **MUST** be followed to ensure the safe operation of your Goldacres equipment.

Explanation of key terms used in this operator's manual are:

**DANGER** - You will be killed or seriously hurt if you don't follow instructions

**WARNING** - You can be seriously hurt if you don't follow instructions

**CAUTION** - You can be hurt if you don't follow instructions

**NOTE** - Is used to notify people of installation, operation or maintenance information that is important but not hazard related.

## The Operator

All operators of this equipment should be adequately trained in the safe operation of this equipment. It is important that all operators have read and fully understand the operators manual prior to using this equipment.

All new operators should be trained in an area without bystanders or obstructions and become familiar with the sprayer prior to operation.

## Safety Precautions

### WARNINGS

- Never stand within the radius of boom wings.
- Keep clear of overhead obstructions.
- **CRUSH HAZARD** - Keep hands clear of moving parts when carrying out boom fold and unfold sequences.
- Any unauthorised modifications to this equipment may affect its function and create a serious safety risk.
- Never attempt to clean parts or nozzles, by blowing with mouth.
- Never attempt to siphon chemicals, or substances, by sucking.

- It is imperative that the vehicle manufacturer's specifications be checked and all instructions for use when transporting, or towing, be adhered to at all times.
- Care should be taken when transferring liquid into the tank to ensure that the gross weight of the equipment does not exceed the carrying, braking and/or towing capacity of the vehicle to which the equipment is attached as specified by the vehicle manufacturer.

**NOTE:** 1 LITRE WATER = 1KG.

- Water weighs 1kg per litre, however conversion factors must be used when spraying liquids that are heavier or lighter than water. Example: liquid urea has a density of 1.28 kg/L and will therefore be significantly heavier than water if the tank is filled completely.
- Suitable care should be taken when driving with the equipment attached to the vehicle. Consideration should be given to both the carrying capacity of the vehicle and the gradient of the terrain when determining the speed at which the vehicle can be driven safely.
- Ensure that the maximum speed of the vehicle, when loaded, is within the vehicle manufacturers limitations.
- Ensure equipment is securely fastened, or attached to the vehicle at all times.
- Regularly check the pump mounting bolts. The pump will always vibrate to some degree when operating, and this may work the bolts loose.

### CAUTIONS

- Always ensure that there is adequate room for the boom to open.
- Always ensure that the boom is adequately supported when transporting.
- A supply of fresh water should be with the equipment at all times.
- Standard polyethylene tanks are not designed for use with diesel fuel or any flammable liquid.

*Continued over page*

- Do not use this machine in ambient temperatures exceeding 40 degrees Celsius.
- Ensure that all bolts are tightened and secured before operation.
- Where fitted, always ensure that the boom is securely supported when travelling.
- Area surrounding equipment may become slippery when wet.

## NOTES

- Always read and understand the operator's manual prior to operation of this equipment.
- It is the responsibility of the operator to ensure that there are no decals missing from the equipment and that any damaged or missing decals are replaced prior to operation.
- Goldacres equipment ordered or operated, outside the guideline limitations may not be warranted by Goldacres for successful performance. Operators working outside these limitations do so at their own risk, unless specific advice has been sought from and provided by Goldacres in writing.
- Always read and follow the chemical manufacturer's guidelines for safe application as per the chemical label. Particular attention should be given to the recommended target application rate of the chemical being applied as per the chemical label.
- Inspect the equipment thoroughly for damage and wear before operation.
- Flush chemicals from equipment immediately after use.
- Certain chemicals may be unsuitable for use with Goldacres standard plumbing designs. Consult your Goldacres dealer if in doubt.
- Do not operate the equipment while under the influence of any drugs, alcohol or if excessively tired.
- Make sure that the equipment complies with all relevant road regulations when transporting.

- When draining fluids from the equipment use appropriate, leak proof containers. Do not use food or beverage containers as someone may consume the contents by mistake.
- After reading the operator's manual if there is any thing that you do not understand please contact your Goldacres dealer.

## Safe Chemical Use

The safe use of Ag chemicals with this equipment is the responsibility of the owner/operators. All operators should be trained in the safe use of Ag chemicals. Goldacres suggest that a relevant course is completed by owners/operators prior to operation of this equipment as a spray unit.

## Personal Protective Equipment (PPE)

Always wear close fitting clothing and safety equipment designed for the job.

Chemicals can be harmful to humans, appropriate PPE should be used when handling chemicals.

Always refer to the chemical manufacturers label for guidelines on the appropriate PPE to use with the chemicals you are using.

Goldacres also suggest that you read and understand the following Australian standards:

- Australian Standard for Chemical protective clothing AS3765
- Australian Standard for Respiratory protection devices AS1715

## Airborne particles

Always stand well clear of equipment during operation. Any spray drift is dangerous and may be hazardous to humans and animals.

## Fluids under pressure

Do not disconnect any hoses, nozzles or filters while equipment is operating. Disconnecting these components while under pressure may result in uncontrolled fluid discharge which may be hazardous.

When the repair is complete ensure that all fittings and lines are secured before re-applying pressure.

## Cuts, Stabs & Punctures

When Servicing machine, be mindful of sharp edges on parts such as trimmed cable ties, hose clamps, cut reinforced hose and the edges of plates and brackets as they could cause cut, stab or puncture injuries.

# General Information & Specifications

Our booms are built using high quality materials to provide the strength and durability needed for accurate spray application. They feature non-drip nozzle bodies and compact dimensions ideal for many applications.

Getting to know your equipment prior to operation is crucial in the safe and efficient operation. Take the time to familiarise yourself with all the standard and optional components fitted so that you become competent in their correct operation.

It is also important to become familiar with common spraying methods and common spraying terms prior to spraying for the first time.

## Spray Height

The standard boom nozzle spacing is 500mm. For this spacing, the optimum height the boom should be from the object to be sprayed (with a 110° fan angle nozzle) is 500mm.

There will be adequate spray coverage if the nozzles are higher than this but this increases the potential for drift. The spray pattern is affected by many factors not limited to, but including, gravity, pressure, chemical composition and droplet size so the pattern does not extend to the full theoretical coverage. Refer to the TeeJet nozzle selection catalogue for further information on spray application and nozzle technology.

Above: Optimal nozzle spacing and spray height with a nozzle fan angle of 110 degrees.

# Boom Fitting & Adjustment Instructions

The towbar booms are supplied in two main parts that must be connected. These consist of the centre section with boom wings and the main support bar.

To fit the main support bar, insert it into the towbar hitch box. Cut the towbar insert length shorter if necessary to suit application.

If the main support bar has play in any direction when fitted, then it may be necessary to use the shim plates provided to create a firm fit.

Place one or more shim plates as required over the hitch pin hole to be used. Fit the self-tapping locking screw. Secure main support bar with your hitch pin.

Next, attach the boom assembly to the main support bar using the supplied u-bolts, nuts and washers. Raise or lower the boom to the desired height and tighten the nuts on the u-bolts. Connect the boom feed line to your spray tank.

If the vertical section of the main support bar is too high after all other adjustments have been completed, then it may be cut shorter. Replace the plastic end cap after cutting.

The tightness of the boom wing pivot bolts may also need to be adjusted.

If they are too loose, then the wings will bounce up and down too easily during spraying. If the boom wing pivot bolts are too tight, then it will be difficult to fold the boom and they will not have any ability to absorb impacts during spraying.

Adjust the tightness of these bolts on both sides so that they are between these two extremes.

The boom wings also have an angle adjustment bolt each. Use these where necessary by tightening or loosening until the angle of the unfolded boom wings is horizontal.

# Booms Folding Procedure

## Unfolding

1. Starting with the boom in the closed position, remove the locking pin on each boom side.
2. Pull the wings out and down until they are horizontal with the ground.
3. Replace the locking pins through the frame only on both sides.

## Folding

1. Starting with the boom in the open position, remove the locking pin on each boom side.
2. Pull the wings up and inward until they are vertical.
3. Replace the locking pins through the frame and wings on both sides.
